SUMMARY

Computer Science undergraduate at KIIT with growing experience in Machine Learning and Deep Learning. Comfortable working with Python-based tools and real-world datasets to build and evaluate predictive models.

EDUCATION

B.Tech in Computer Science and Engineering

2023 – 2027

Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar

CGPA: 8.94 / 10

Relevant Coursework: Data Structures, OOPs, Probability & Statistics, OS, DBMS, Computer Organization & Architecture, Automata & Formal Languages

SKILLS

Programming: Python, Java, C

Data Science Tools: Pandas, NumPy, Matplotlib, Seaborn, TensorFlow, Keras, Scikit-learn, SQL

Data Handling & Analysis: Data Collection, Data Cleaning, EDA

Developer Tools: GitHub, Jupyter Notebook, Anaconda, Command Line, OpenCV, MediaPipe, NLTK

Problem Solving: 250+ problems on LeetCode, GeeksforGeeks, HackerRank

PROJECTS

Emotion Classification (Attention-BiLSTM)

Developed BiLSTM and Attention-BiLSTM models on a 416K dataset to detect emotions in social media posts. Applied text preprocessing, tokenization, and sequence padding to capture contextual and negation-driven patterns. Contributed to a group research project with an accompanying research paper.

Tools: Python, Keras, NumPy, Matplotlib, Scikit-learn

Sign Language to Text (CNN)

Designed and trained a CNN for real-time sign language recognition using webcam input across 6 gesture classes. Used OpenCV and MediaPipe for gesture detection and preprocessing, achieving 94% validation accuracy.

Tools: Python, Keras, OpenCV, MediaPipe, NumPy, Matplotlib

Spam Email Detection System

Led a group research project comparing Naive Bayes, Logistic Regression, and SVM on the Enron dataset (33,716 emails) using a TF-IDF pipeline. SVM achieved 99.91% accuracy, 100% recall, and only 6 false positives. Co-authored and published a **research paper** on the findings.

Tools: Python, Scikit-learn, NLTK, Pandas

House Price Prediction

Developed a regression pipeline on the Ames Housing Dataset comparing Linear Regression, Ridge, Decision Tree, and Random Forest models. Applied feature engineering, data cleaning, and one-hot encoding, achieving $R^2 = 0.89$.

Tools: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

CERTIFICATIONS

- **Data Science and Machine Learning** – GeeksforGeeks
- **Java, Python & Problem Solving** – HackerRank
- **Supervised Machine Learning: Regression and Classification** – DeepLearning.AI
